

**FOLD-A-COVER G4-ELITE**  
**VS**  
**BAKFLIP G2**

**How do I open and close the cover?**

**FOLD-A-COVER G4-ELITE**

**Opening and closing the rear panel!**

To open your Fold-a-Cover simply lift the convenient flush mounted paddle style handle on the top edge of the rear panel; this releases the latches and allows you to open the rear panel; in a smooth motion using only one hand. Closing the rear panel is as easy as dropping it shut.

**Folding and unfolding the cover to the fully open and fully closed positions!**

Fold the cover the rest of the way to the open position. Snap the docking straps in place to travel with the cover in the open position; simply reverse these steps to close the cover in one smooth continuous motion. When the rear panel reaches the closed position it is latched.

**Opening the front panel!**

One of the unique features of the Fold-a-Cover is the ability to open the front panel of the cover independently. Simply lift the flush mounted paddle style handle on the front panel; this releases the latches and opens the front panel; in a smooth motion using only one hand. This is very convenient to retrieve items from the front of the truck bed without having to opening the entire cover. To close the front panel drop it shut.

**BAKFLIP G2**

**Opening and closing the rear panel!**

To open the Bakflip G2 cover you must first open the tailgate. Reach under the back edge of the rear panel to locate the cable that operates the latches, pull the cable to release the latches and the rear panel is ready to be folded to the open position. To close the rear panel: close the tailgate and then close the rear panel.

**Folding and unfolding the cover to the fully open and fully closed positions!**

To fold the next panel of the Bakflip G2 cover you must reach over the side of the truck bed or crawl into the truck bed. Reach under back edge of the folded panels to locate the cable that operates the latches, pull on the release cable to release the latches and the panel is ready to be folded to its open position. Repeat this operation at each panel until all of the panels are released and fold the cover up against the rear window of the truck. Secure the prop rods in place to travel with the cover in the open position. To close the cover; reverse these steps; checking that each panel re-latches as it reaches its closed position.

**Opening the front panel!**

Front panel does not open independently on Bakflip G2 covers. The only way the front panel opens is to open the cover all the way from the rear panel to its fully open position.

## **How do I lock the Cover?**

### **Locking the cover!**

Simply lock your Fold-a-Cover to provide security for your cargo. Your Fold-a-Cover even locks the tailgate if the truck is not equipped with a locking tailgate.

### **Locking the cover!**

Bakflip G2 covers do not offer a provision to lock the cover.

## **How much bed space is available when the cover is open?**

### **Cargo Access!**

The Fold-a-Cover gives you access to 75% of your truck bed in the open position; while allowing a clear unobstructed view out the rear window of the cab.

### **Cargo Access!**

The Bakflip G2 cover offers approximately 90% access to the bed of your truck in the open position; but to achieve this small increase in available bed space it completely blocks the view out of the rear window of the cab.

## **Can I tow a fifth wheel trailer with the cover in the open position?**

### **Fifth Wheel Trailer Compatible!**

The Fold-a-Cover is compatible with most fifth wheel trailer hitches. Simply fold the cover to the fully open position; secure the docking straps and back up to your trailer.

### **Fifth Wheel Trailer Compatible!**

The Bakflip G2 cover is compatible with most fifth wheel trailer hitches. The rear window view is completely obstructed by the cover making it very difficult to back up to the trailer

## **How does the Fold-a-Cover mount to my truck bed!**

### **Compare Mounting Hardware!**

All Fold-a-Cover mounting hardware is specifically designed for each truck bed application. Wind seal rails attach securely to the stake pocket holes. Our patented C-Clamp mounting system not only attaches the cover to the truck bed but it allows the front panel to open independently for easy access to items in the front of the truck bed.

### **Compare Mounting Hardware!**

The Bakflip G2 cover uses a universal mounting rail that must be shimmed in place with plastic pieces to make it fit the truck bed. Universal pinch type clamps hold the rail in place. The cover mounts to the rails and offers little or no adjustment to allow for manufacturing variances in truck beds.

## **What is the cover made of?**

### **Fold-Cover Panels!**

Panels are made of textured aluminum bonded to an EPS foam core. The panels are assembled on our state of the art hot melt lamination line. (See Video) Specially engineered adhesive and extreme pressure in our Black Brothers® hot press assures strong consistent panels.

### **Fold-a-Cover Hinges!**

Fold-a-Cover hinges are made of stainless steel and aluminum. They are a continuous design and are full length between each panel.

### **Fold-a-Cover Latches!**

Steel rotary style automotive latch mechanisms lock securely to a steel striker pin.

### **Bakflip G2 Panels!**

Panels are made from plastic and are attached to a foam core with adhesive applied by hand.

### **Bakflip G2 Hinges!**

Bakflip G2 hinges are made of a rubber material that simply slides into groves between each panel.

### **Bakflip G2 Latches!**

Spring loaded plastic cabinet door style latches slide under the edge of the mounting rail.

## **Is there an integrated cargo management system available?**

### **Cargo Management Options!**

Fold-a-Cover offers an optional patented totally integrated cargo management system called the Personal Caddy. It installs under the front panel directly behind the cab and is accessed by opening the front panel of the cover. The caddy protects tools, sporting goods, camping equipment, groceries or anything that needs controlled storage or transportation. An optional sliding tray keeps small items in place and within easy reach. Personal Caddy is available for many G4-ELITE applications.

### **Cargo Management Options!**

Bakflip G2 does not currently offer in box cargo management systems.
